On February 4, 2020, Autodesk announced the immediate discontinuation of its AutoCAD software product line. The timeline of the AutoCAD family of software products is given below: AutoCAD History and Features The first release of AutoCAD software was AutoCAD LE, or AutoCAD Level 1, released on December 16, 1984. It was available for the Apple II, Atari, Commodore PET, Macintosh and IBM PC platforms. Since then, the number of platforms AutoCAD is available on has grown and continues to grow. At its January 2018 software release, Autodesk introduced AutoCAD LT, or AutoCAD Level 2, offering new features and functionality for AutoCAD LT users and a new, more intuitive user interface. The new release is the first for the AutoCAD software family since AutoCAD 2010 was released in March 2010. Like the current version of AutoCAD LT, AutoCAD LT 2016 was released in August 2016. It features a new, more intuitive user interface, a new collaboration feature that lets users work on the same drawing at the same time from different locations, and the ability to automatically and synchronously reference and share other drawings. Features There are three tiers of AutoCAD products: Design Drafting Technical Design (AutoCAD) Design is the core AutoCAD product offering. Users design everything from two-dimensional (2D) and three-dimensional (3D) drawings and 3D models to web maps and site plans. Drafting (AutoCAD LT) Drafting is a lower-cost version of AutoCAD available to non-commercial users. Users can create 2D and 3D drawings, and also convert PDF files, Microsoft Word files, Microsoft Excel files, and Adobe Illustrator files into AutoCAD drawings. Technical (AutoCAD LT) Technical is a lower-cost version of AutoCAD available to non-commercial users. Users can edit existing drawings, calculate a drawing's technical properties and prepare technical reports, for example, FEA (finite element analysis) reports, BIM (building information modeling) models, and animations. Mobile (AutoCAD LT) Mobile is a web-based version of AutoCAD that lets users create 2D and 3D drawings and access technical data from mobile devices.

The use of morphological criteria to evaluate thrombotic thrombocytopenic purpura. The records of 36 patients with thrombotic thrombocytopenic purpura (TTP) were reviewed to evaluate the applicability of morphological criteria in the diagnosis of this disease. All patients had low platelet counts, thrombocytopenia, and the development of microangiopathic hemolytic anemia. Platelets were morphologically abnormal in all 36 patients. Fibrin thrombi were observed on the luminal surface of the capillary endothelium. The presence of thrombi on the luminal surface of the microvessels and platelets in an abnormal configuration was suggestive of the diagnosis. The morphological studies were essential in establishing the diagnosis of TTP and often aided in the exclusion of other diseases in which thrombocytopenia occurs. Other studies were needed to distinguish between the various types of thrombotic thrombocytopenic purpura. The primary objective of the University of Virginia (UVA) Family Medicine Residency Program is to train competent family medicine physicians who can meet the health care needs of the entire population of the United States. In pursuit of this goal, the program's research faculty have a substantial commitment to research and an equal commitment to teaching and clinical care. Thus, our long-term objective is to increase the number of physicians with research experience and a track record of productivity to be trained by our family medicine residency program, thereby increasing the number of family physicians with research training and experience available for the research community. To facilitate the research training experience of our residents, this training grant will fund the research laboratory of one of the program faculty. The primary aims of this grant are: 1) to provide research support for one or two research faculty members of the family medicine residency program,
