CAGWS CAGWS is a library of C++ classes for the ObjectARX-based class library. The classes are used for automated generation of web-based drawings using ADF (Application Developer Framework) technology. The ADF framework allows the generation of web-based client applications from ADF-based objects. In June 2010, Autodesk stopped developing CAGWS, and ceased to provide support for it in AutoCAD. However, some AutoCAD users continue to use CAGWS for automated generation of web-based drawings. History AutoCAD was originally developed in the early 1990s by Werner Joost, then a programmer for Autodesk. Its initial appearance was as AutoLISP, a proprietary, interactive programming language. In 1992, the result of the first fully committed team effort, the first version of AutoLISP was released as part of AutoCAD, named LISP. It was available for the first time on October 25, 1992, and was priced at US$595. It was quickly realized that developers needed a standard scripting language to extend the existing functionality of the program. Because of this, when AutoCAD for Windows was released in 1994, it included a scripting language called VBA. In 1997, the ObjectARX-based class library for CAGWS was developed. In 1999, the first plug-in for AutoCAD was developed. On December 11, 2008, Autodesk released version 2006 of AutoCAD, thus the term AutoCAD 6 was coined, since the version is six years after the debut of the first AutoLISP product. The first desktop AutoCAD was AutoCAD 14, released in 1998. There are four variations of AutoCAD; the last three, AutoCAD 2010, AutoCAD 2011 and AutoCAD 2013, can only be used as client-side applications (PC- and Mac-based), since they do not have the web-based version. They were made available in 2009 and 2010. The first release of AutoCAD 2011 came with a new visual LISP, which allowed users to "write their own software" in Visual LISP. It was replaced by C++/CLI in 2012. The latest release of AutoCAD 2013 was officially released on January 29, 2013, was named AutoCAD 2013 Ultimate, and had a price tag of US$2,999. It is still marketed as Auto a1d647c40b
